

*marimba one*<sup>®</sup> Introduces a New Mallet Wrapping Technology...

*Wave Wrap*

*Wave Wrap's double equatorial wrap creates a unique chevron pattern around the playing surface and a distinctive wave signature on top of the head; two striking visual signatures exclusive to the world's finest marimba mallets.*

**Marimba One's singular mallet revolution makes for an expanded range throughout the keyboard, one-of-a-kind touch, balance, and sound.**

*After one of the strands makes a revolution around the mallet head, the other strand makes a revolution, securing the previous strand in place.*

- Our patented process allows us to simultaneously wind two types of yarn; wool and nylon for example.
- By using different yarns in the same mallet and by controlling the tension of each strand, we are able to control the desired sound.

## Wave Wrap Mallets

The highest concentration of yarns lies around the mallet's equator. This means:

- An increased striking surface.
- Quicker and more responsive than traditionally wrapped heads.
- Features wool and nylon yarn wound on the mallet head for minimum contact sound and wonderful articulation.
- Available in five varying models of hardness and density.
